Expansion of Export, Reexport, and Transfer (In-Country) Controls for Military End Use or Military End Users in the People’s Republic of China, Russia, or Venezuela; Correction

AGENCY: Bureau of Industry and Security, Department of Commerce.

ACTION: Final rule; correction.

SUMMARY: The Bureau of Industry and Security (BIS) is correcting the formatting of a final rule that appeared in the Federal Register of April 28, 2020 (here and after referred to as the April 28 rule), which becomes effective on June 29, 2020. The April 28 rule amends the Export Administration Regulations (EAR) to expand license requirements on exports, reexports, and transfers (in-country) of items intended for military end use or military end users in the People’s Republic of China (China), Russia, or Venezuela. Specifically, this rule expands the licensing requirements for China to include “military end users,” in addition to “military end use.” It broadens the list of items for which the licensing requirements and review policy apply and expands the definition of “military end use.” Next, it creates a new reason for control and the associated review policy for regional stability for certain items exported to China, Russia, or Venezuela, moving existing text related to this policy. Finally, it adds Electronic Export Information filing requirements in the Automated Export System for exports to China, Russia, and Venezuela. This rule supports the objectives discussed in the National Security Strategy of the United States. This correction publishes the full text of each revised Export Control Classification Number on the Commerce Control List.

DATES: This correction is effective June 29, 2020.

Special Conditions for STA

STA: (1) Paragraph (c)(1) of License Exception STA (§ 740.20(c)(1) of the EAR) may not be used for “spacecraft” in ECCN 9A515.a.1, .a.2, .a.3, or .a.4, or items in 9A515.g, unless determined by BIS to be eligible for License Exception STA in accordance with § 740.20(g) (License Exception STA eligibility requests for certain 9x515 and “600 series” items). (2) License Exception STA may not be used if the “spacecraft” controlled in ECCN 9A515.a.1, .a.2, .a.3, or .a.4 contains a separable or removable propulsion system enumerated in USML Category IV(d)(2) or USML Category XV(o)(12) and designated MT. (3) Paragraph (c)(2) of License Exception STA (§ 740.20(c)(2) of the EAR) may not be used for any item in 9A515.

List of Items Controlled

Related Controls: Spacecraft, launch vehicles and related articles that are enumerated in the USML, and technical data (including “software”) directly related thereto, and all services (including training) directly related to the integration of any satellite or spacecraft to a launch vehicle, including both planning and onsite support, or furnishing any assistance (including training) in the launch failure analysis or investigation for items in ECCN 9A515.a, are “subject to the ITAR.” All other “spacecraft,” as enumerated below and defined in § 772.1, are subject to the controls of this ECCN. See also ECCNs 9A001, 9A002, 9A003, 9A004, 6A004, 6A005, and 6A998 for specific “space-qualified” items, 7A004 and 7A104 for star trackers, and 9A004 for the International Space Station (ISS), the James Webb Space Telescope (JWST), and “specially designed” “parts” and “components” therefor. See USML Category XII(c) for controls on “Monolithic Microwave Integrated Circuit” (“MMIC”) amplifiers that are “specially designed” for defense articles. See ECCN 9A610.g for pressure suits used for high altitude aircraft.

Related Definitions: ‘Microcircuit’ means a device in which a number of passive or active elements are considered as indivisibly associated on or within a continuous structure to perform the function of a circuit.

Items:

“Spacecraft” and other items described in ECCN 9A515 remain subject to the EAR even if exported, reexported, or transferred (in-country) with defense articles “subject to the ITAR” integrated into and included therein as integral parts of the item. In all other cases, such defense articles are subject to the ITAR. For example, a 9A515.a “spacecraft” remains “subject to the EAR” even when it is exported, reexported, or transferred (in-country) with a “hosted payload” described in USML Category XV(e)(17) incorporated therein. In all other cases, a “hosted payload” performing a function described in USML Category XV(a) always remains a USML item. The removal of the defense article subject to the ITAR from the spacecraft is a retransfer under the ITAR and would require an ITAR authorization, regardless of the CCL authorization the spacecraft is exported under. Additionally, transfer of technical data regarding the defense article subject to the ITAR integrated into the spacecraft would require an ITAR authorization.

a. “Spacecraft,” including satellites, and space vehicles, whether designated developmental, experimental, research or scientific, not enumerated in USML Category XV or described in ECCN 9A004.u or .w, that:

a1. Have electro-optical remote sensing capabilities and having a clear aperture greater than 0.35 meters, but less than or equal to 0.50 meters;

a2. Have remote sensing capabilities beyond NIR (e.g., SWIR, MWIR, or LWIR);

a3. Have radar remote sensing capabilities (e.g., AESA, SAR, or ISAR) having a center frequency equal to or greater than 1.0 GHz, but less than 10.0 GHz and having a bandwidth equal to or greater than 100 MHz, but less than 300 MHz;

a4. Provide space-based logistics, assembly, or servicing of another “spacecraft”; or

a5. Are not described in ECCN 9A515.a.1, .a.2, .a.3, or .a.4.

Note: ECCN 9A515.a includes commercial communications satellites, remote sensing satellites, planetary rovers, planetary and interplanetary probes, and in-space habitats, not identified in ECCN 9A004 or USML Category XV(a).

b. Ground control systems and training simulators “specially designed” for telemetry, tracking, and control of the “spacecraft” controlled in paragraphs 9A004.u or 9A515.a.
d. Microelectronic circuits (e.g., integrated circuits, microcircuits, or MOSFETs) and discrete electronic components rated, certified, or otherwise specified or described as meeting or exceeding all the following characteristics and that are “specially designed” for defense articles, “600 series” items, or items controlled by ECCNs 9A004.v or 9A515:

d.1. A total dose of $5 \times 10^5$ Rads [Si] ($5 \times 10^5$ Gy [Si]);

d.2. A dose rate upset threshold of $5 \times 10^8$ Rads [Si/SEC] ($5 \times 10^6$ Gy [Si/SEC]);

d.3. A neutron dose of $1 \times 10^{14}$ n/cm$^2$ (1 MeV equivalent);

d.4. An uncorrected single event upset sensitivity of $1 \times 10^{-10}$ errors/bit/day or less, for the CREME–MC geosynchronous orbit, Solar Minimum Environment for heavy ion flux; and

d.5. An uncorrected single event upset sensitivity of $1 \times 10^{-10}$ errors/part or less for a fluence of $1 \times 10^7$ protons/cm$^2$ for proton energy greater than 50 MeV.

e. Microelectronic circuits (e.g., integrated circuits, microcircuits, or MOSFETs) and discrete electronic components that are rated, certified, or otherwise specified or described as meeting or exceeding the characteristics in either paragraph d.1 or d.2, AND “specially designed” for defense articles controlled by USML Category XV or items controlled by ECCNs 9A040.4 or 9A515:

e.1. A total dose $\geq 5 \times 10^5$ Rads [Si] ($5 \times 10^5$ Gy [Si]) and < $5 \times 10^5$ Rads [Si]) and a single event effect (SEE) (i.e., single event latching (SEL), single event burnout (SEB), or single event gate rupture (SEGR)) immunity to a linear energy transfer (LET) $\geq 200$ MeV-cm$^2$/mg; or

e.2. A total dose $25 \times 10^5$ Rads [Si] ($5 \times 10^5$ Gy [Si]) and not described in 9A515.d.

Note 1 to 9A515.d and e.: Application specific integrated circuits (ASICs), integrated circuits developed and produced for a specific application or function, specifically designed or modified for defense articles and not in normal commercial use are controlled by Category XII(c) of the USML regardless of characteristics.

Note 2 to 9A515.d and e.: See 3A001.a for controls on radiation-hardened microelectronic circuits “subject to the EAR” that are not controlled by 9A515.d or 9A515.e.
